

CM CHIP SHREDDER

THE MOST EFFICIENT SECONDARY SHREDDER

The CM Chip Shredder provides solutions for high volume production of specifically sized tire chips.

Processes shreds into specifically sized chips ideal for use as Tire Derived Aggregate (TDA), Tire Derived Fuel (TDF), or feedstock for crumb rubber.

With the addition of a screen, the Chip Shredder can be used to produce a variety of chip sizes.

The CM Chip Shredder is the leader for processing tire shreds to chips. A Chip Shredder, or Chipper, is a secondary shredder placed after a Primary shredder in order to produce specifically sized chips in high production applications. Tire chips can be used for Tire Derived Aggregate (TDA), Tire Derived Fuel (TDF), or for crumb rubber feedstock.

CM's patented Multi-Stack knife systems ensure the best chip quality possible. Chips are clean cut with very little exposed steel, which is critical to the efficiency of the system and when producing tire chips for sale.

MODELS AVAILABLE

DUAL DRIVE

• DD-250

SINGLE DRIVE

• SD-175

2" CHIPS

FEATURES & BENEFITS

- Impressive Production Rates
- Follows a Primary Shredder to Produce Chips
- Integrates with a Screen for Uniform Sizing
- Resharpenable Knives for Multiple Uses
- Patented Technology for the Cleanest Cut Chips

1" CHIPS

PRODUCTION RATES

4" [100MM] CHIPS:
12 TONS / HOUR

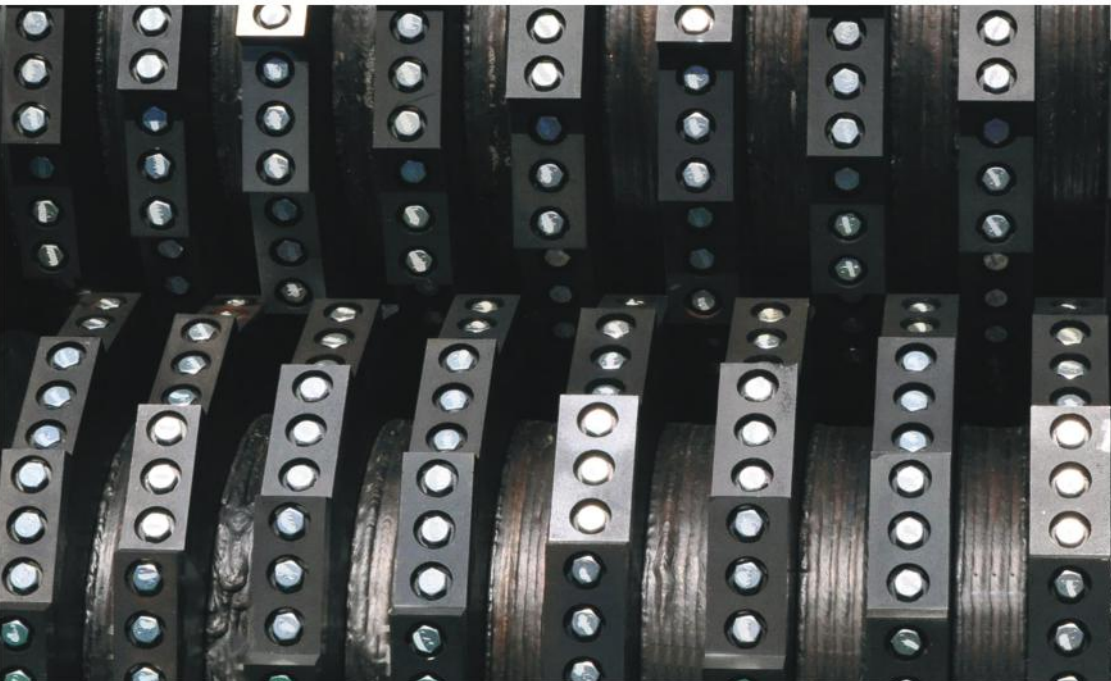

2" [50MM] CHIPS:
10 TONS / HOUR

1.5" [38MM] CHIPS:
7 TONS / HOUR

1" [25MM] CHIPS:
5 TONS / HOUR

CM PATENTED MULTI-STACK™ KNIFE CONFIGURATION

SHARPENABLE MULTI-USE KNIVES

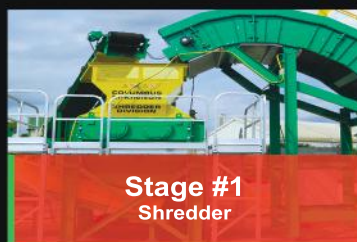

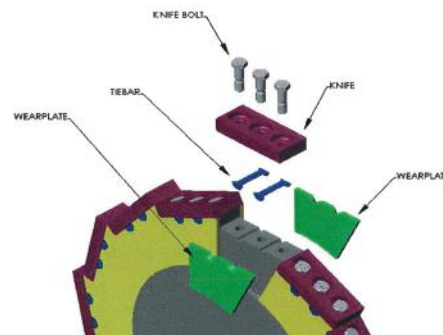

CM “Multi-Stack™” replaceable knife inserts are made of through hardened tool steel. These knives can be repositioned, reground and reused up to 3 times.

This patented feature also uses the closest knife to knife tolerances possible.

This allows the system to produce the cleanest cut chips with the least exposed wire.

The CM Chip Shredder is the most cost effective shredder in operation today. Its “Multi-Stack™” knife technology allows it to process more tires at lower costs than any other system. The cost of knives and the associated costs with knife changes is the leading cost driver to operating a shredder.

CM’s replaceable knife systems run longer between knife changes, take less time to change, and cost less to replace. These systems provide the least cost of ownership of any shredder on the market today.

CUSTOMER SERVICE IS SECOND TO NONE – WITH IN STOCK GUARANTEE

- We stock a complete line of replacement parts for all CM equipment with shipping on standard parts within 24 hours.
- Field Service Technicians support if your equipment needs maintenance or repairs & can generally be onsite within 24 hours.
